

The background features several stylized mechanical components. In the top left is a red and grey bolt. In the top center is a grey mechanical arm or bracket. In the top right is a grey circular flange with a red ring. In the bottom left is a red and grey engine or motor. In the bottom center are three grey gears. In the bottom right is a grey mechanical assembly with a black roller.

Sensor Simulation & MQTT Data Layer

Simulate a smart factory and publish real-time sensor data

Communication

Implementation

- 4 Virtual Machines
- 4 Sensors per Machine
 - Temperature
 - Vibration
 - Current
 - RPM
- ESP32 Simulator (Wokwi)
 - Machine 2 uses real potentiometersTemperature Control
 - Vibration Control

Sensor Simulation & MQTT Data Layer

Simulate a smart factory and publish real-time sensor data

MQTT Topic Structure

**factory/
machine1/
temperature
vibration
current
rpm**

JSON Payload

```
{  
  "machine":"machine2",  
  "sensor":"temperature",  
  "value":72  
}
```

Demo Scenario

Machine 2 gradually:

↑ Temperature

↑ Vibration

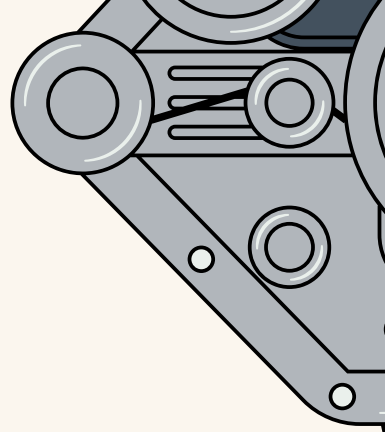

Health decreases

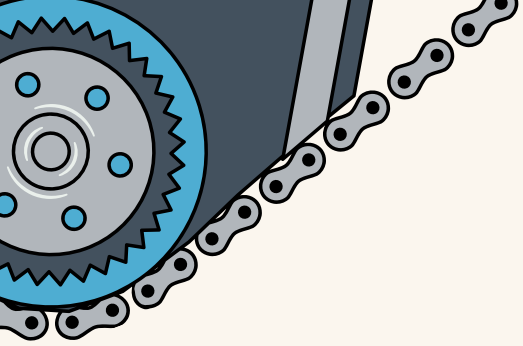

Failure Detection

Predictive Maintenance Trigger
